

Module 1

- 1) start writing prompts like a pro
- 2) Design prompts for everyday work task
- 3) speed up data analysis and presentation building
- 4) Use AI as a creative or expert partner

Advance Prompting techniques

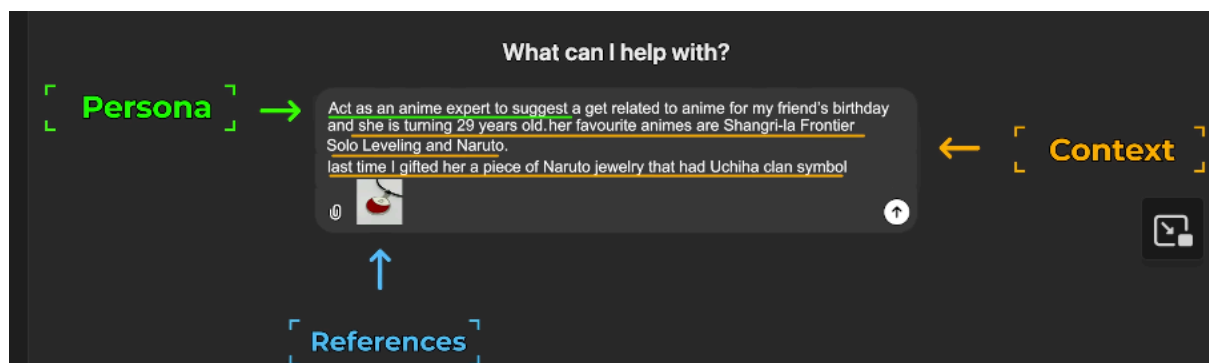

- Prompt chaining
- Chain of thought
- tree of thought
- Framework for creating agents

Prompting is the process of providing specific instructions to a gen AI tool to receive new information or to achieve a desired outcome on a task.

5 steps framework of prompting

Task, Context, References, Evaluate, Iterate

- 1) Task : what you want the AI to do (Persona, Format of the output)
- 2) Context : Elaborate stuff
- 3) References: Examples ,
- 4) Evaluate: output (format we want)
- 5) Iterate: Circular process (refining the prompt until we get great output)

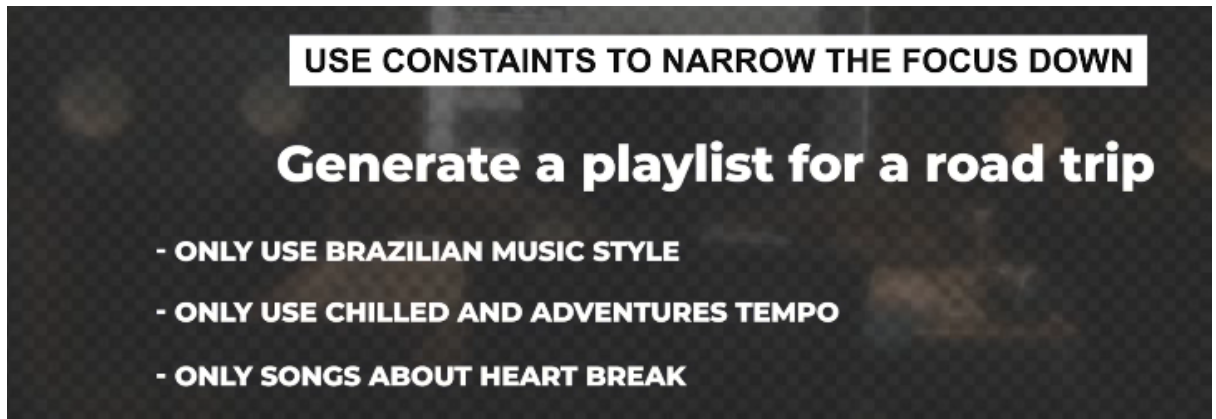

Input frameworks

Thoughtfully Create Really Excellent Inputs

Thoughtfully create really excellent input

- 1) Separate prompts into shorter Sentences
- 2) Trying different phrasing or switching to an analogous task
- 3) introduce constraints to narrow to focus down

Multimodal prompting:

Design a visually appealing digital teaser to promote an upcoming event, incorporating the brand's logo and signature colors. The teaser should be modern and engaging, featuring the event's key details, such as the name, date, location, and a catchy tagline. Use dynamic elements, bold typography, and seamless transitions that align with the brand's aesthetic, ensuring the design exudes excitement and professionalism. Aim for a captivating teaser that sparks curiosity and encourages audience participation.

Hallucinations:

it is when a tool provides outputs that are inconsistent, incorrect, or even nonsensical

Biases: AI systems trained on human-generated content often inadvertently inherit the biases present in that content, including those related to gender, race

1) Evaluate Suitability: Ensure AI fits the task and doesn't reinforce harmful biases.

2) Get Approval: Obtain company consent before using AI on projects.

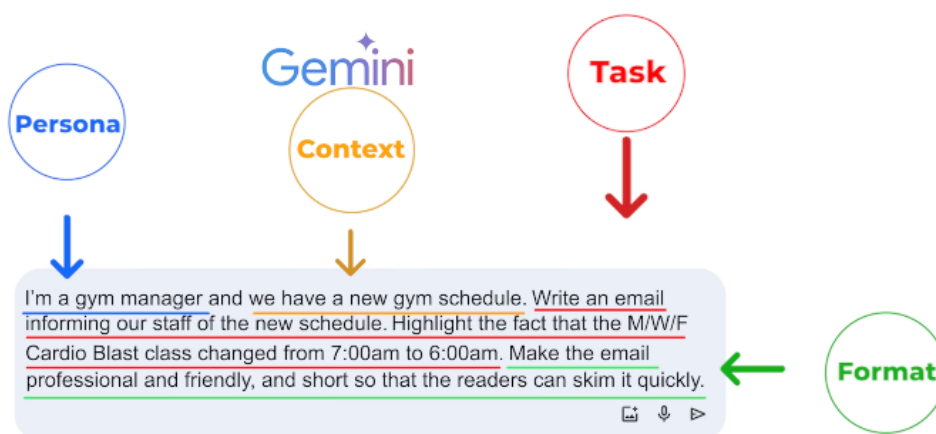

3) Protect Privacy: Use secure tools and avoid exposing sensitive data.

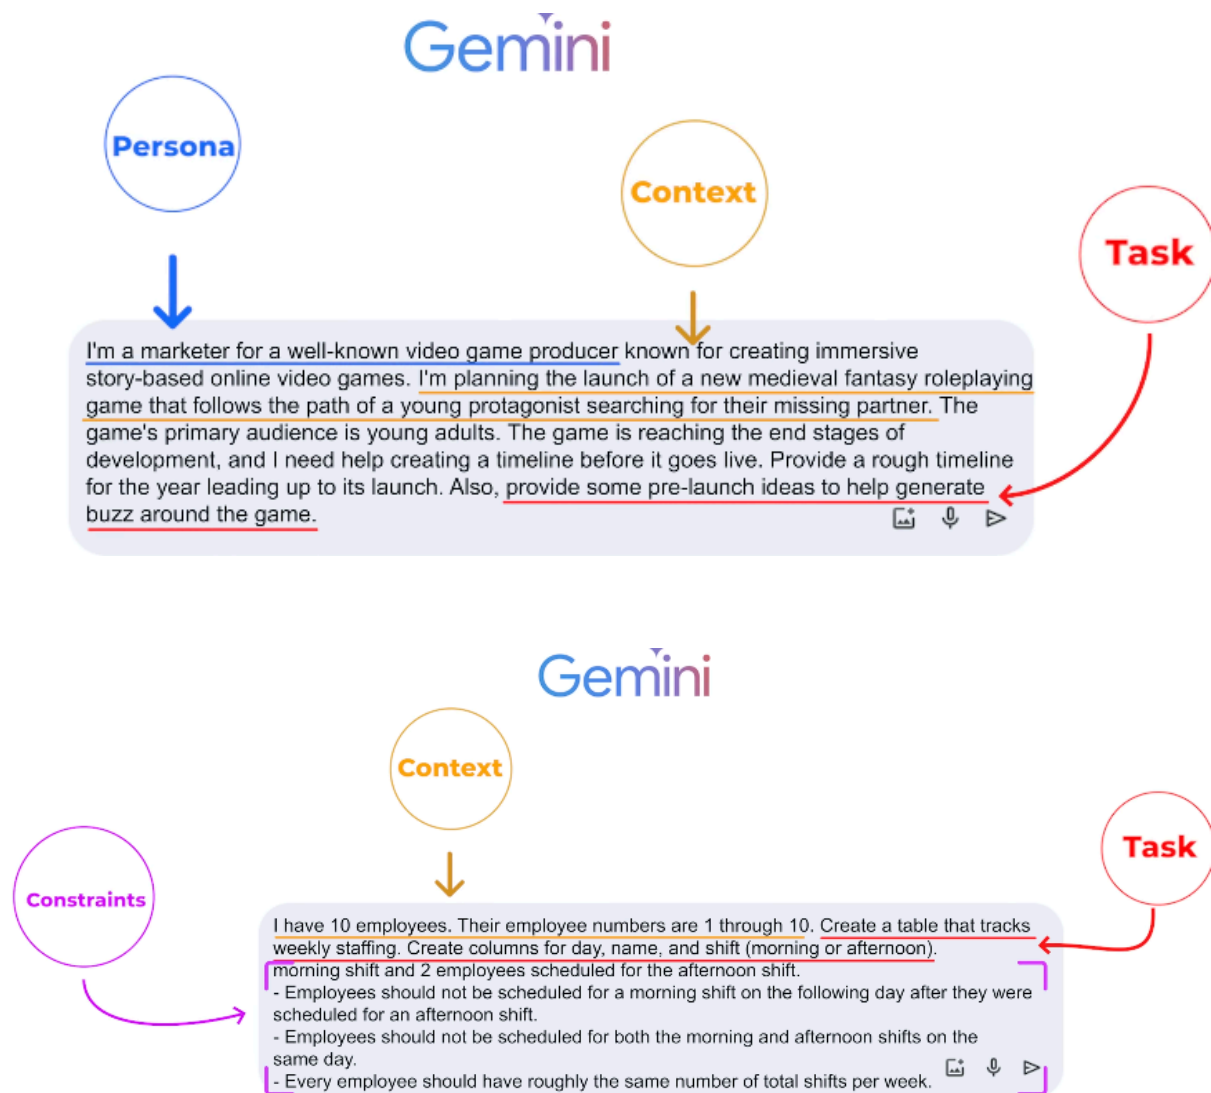

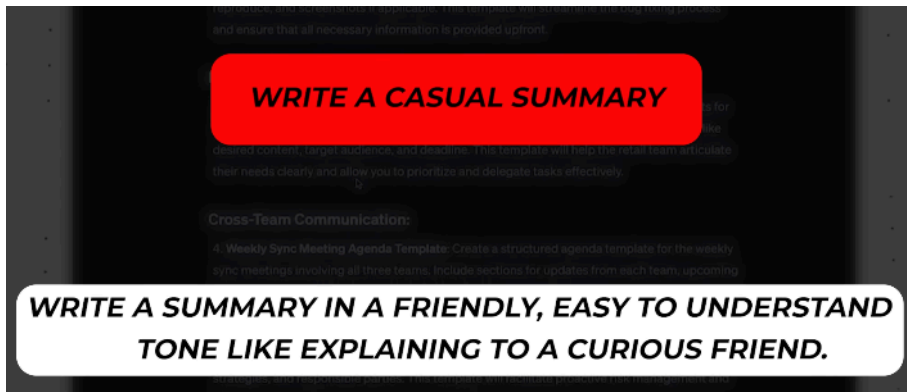

4) Validate Outputs: Review all AI-generated content before sharing.

5) Be Transparent: Disclose AI use to teams and clients.

Module 2

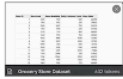

Prompts Example for Day to Day life

Module 3 : Data Analysis and presentation

- Attached is a Google Sheet of store data. How can I create a new column in Sheets that calculates the average sales per customer for each store.

Alternatively, you can use a more descriptive formula that labels the new column:

- 1) Add a new column: Click on the letter of the column to the right of "Store Sales" (which would be column F) to select the entire column.
- 2) Enter a header: In the cell F1, type "Average Sales Per Customer".
- 3) Enter the formula: In the cell F2, type the following formula: $=E2/D2$
- 4) Drag the formula down: Click on the bottom-right corner of the cell containing the formula (F2) and drag it down to the last row of data.

Important Note: This calculation assumes that the "Daily Customer Count" represents the total number of customers who made purchases at the store on that day. If that is not the case, you may need to adjust the formula accordingly.

Give me insights into the relationship between "Daily Customer Count," "Items Available," and "Sales" based on the given data.

Task

I work at a large restaurant and I need to order inventory while my coworker is on leave. They left me with a formula to calculate how much food to order, but I don't understand it: $=IFERROR(ROUNDUP(MAXO, VLOOKUP(B2, Inventory!A:B, 2, FALSE) * 0.2 - C2) + SUMIFS(Reservations!D:D, Reservations!A:A, ">=" & TODAY(), Reservations!A:A, "<" & (TODAY()+7), Reservations!C:C, B2) * 0.12), "Check Inventory")$. Explain what the formula means in simple, step-by-step terms.

Presentation:

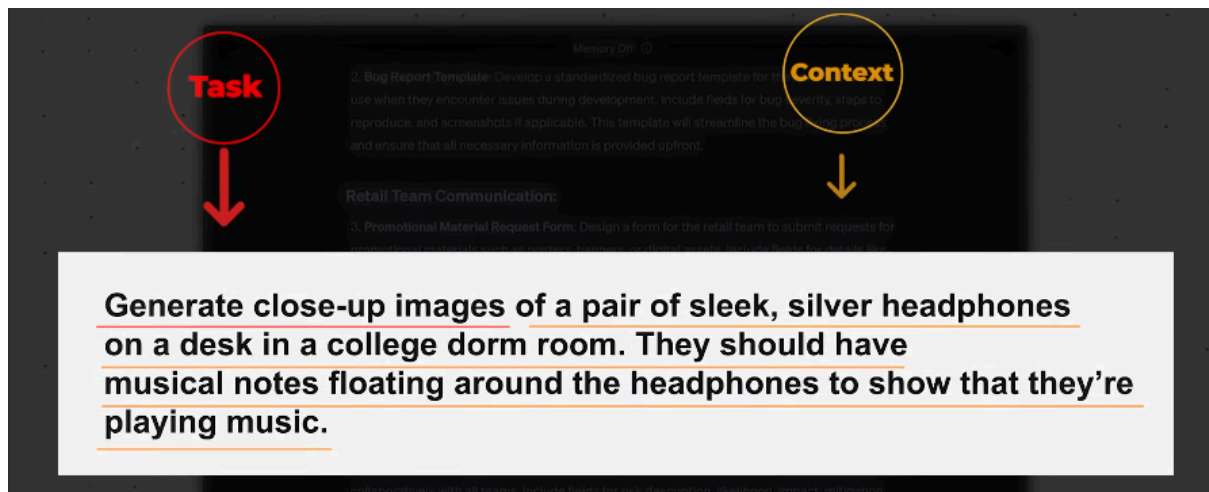

Persona

Context

Format

Task

I'm a product designer at a headphones brand. I'm putting together a presentation for my team about what new features should be included in our next product line. The presentation includes findings from our market research on features that our 18-to 34-year-old customers want their headphones to have. These features include new colors, the ability to control playback with head movements, and noise-canceling capabilities. Consider the relationship between our demographics' disposable income and their most important considerations when buying headphones. How should I structure my presentation? List each slide's topic with its key points and visuals.

Module 4

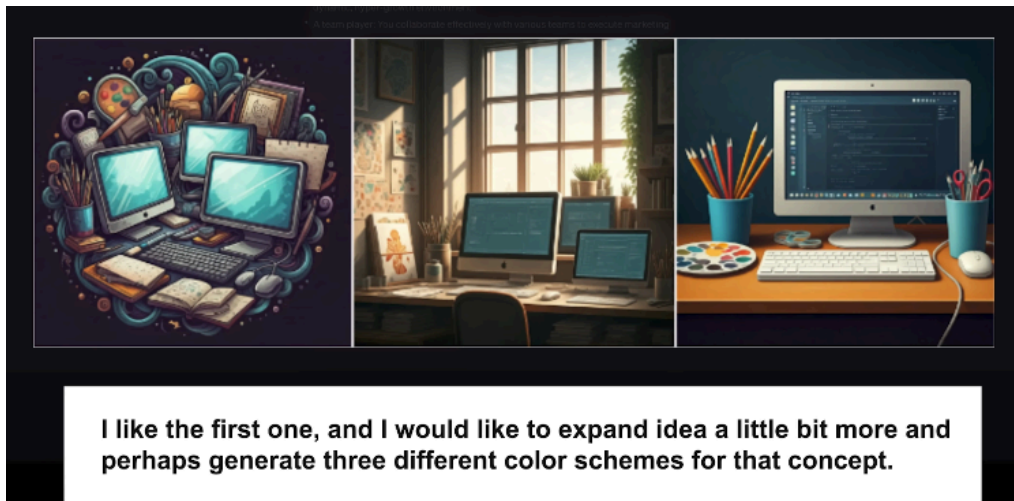

Prompt Chaining: Prompt chaining guides gen ai tool through series of interconnected prompts, adding new layers of complexity along the way

Chain of thought prompting : Ask AI to explain its reasoning as a step by step process

Tree of thought prompting :

Imagine three different designers are pitching their design to me. All designers will write down one step of their thinking, then share it with the group. Then all experts will go on to the next step, etc. If any expert realizes they're wrong at any point, then they leave.

The question is: Generate an image that's visually energetic, and features images of art supplies and computers. Show me three suggestions in very different styles from simple to detailed and complex.

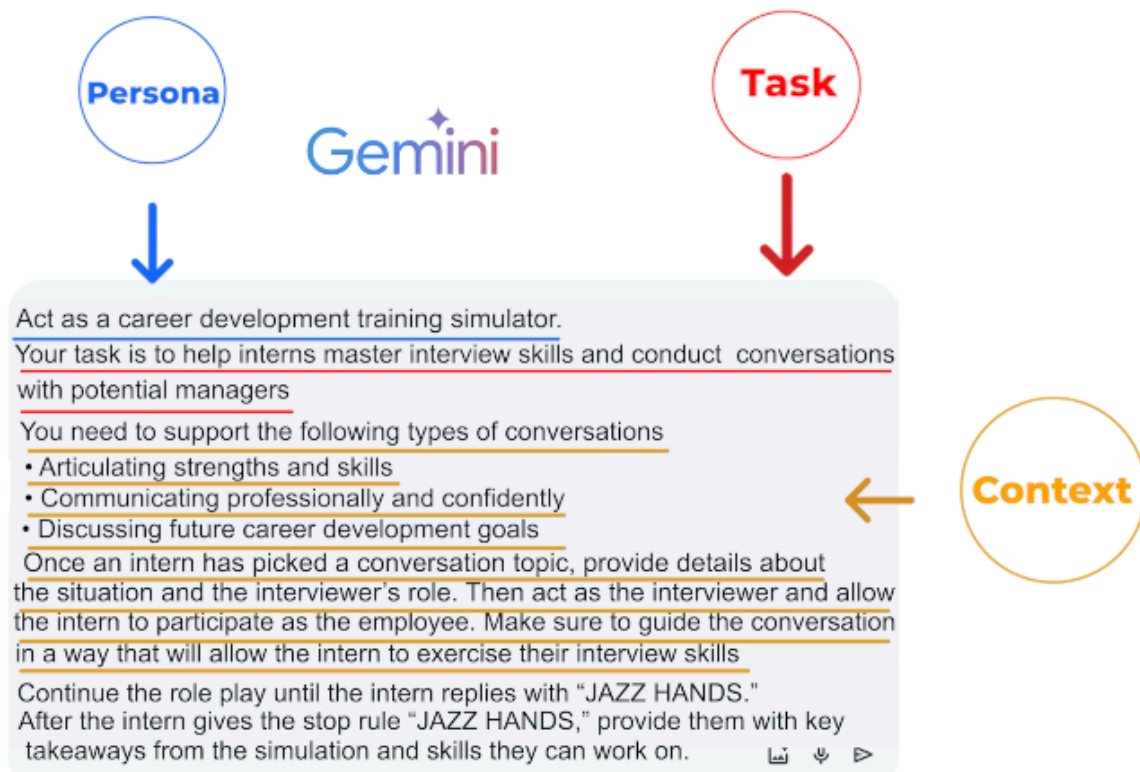

Meta prompting : Ai will come up with a prompt

module 5 Agents

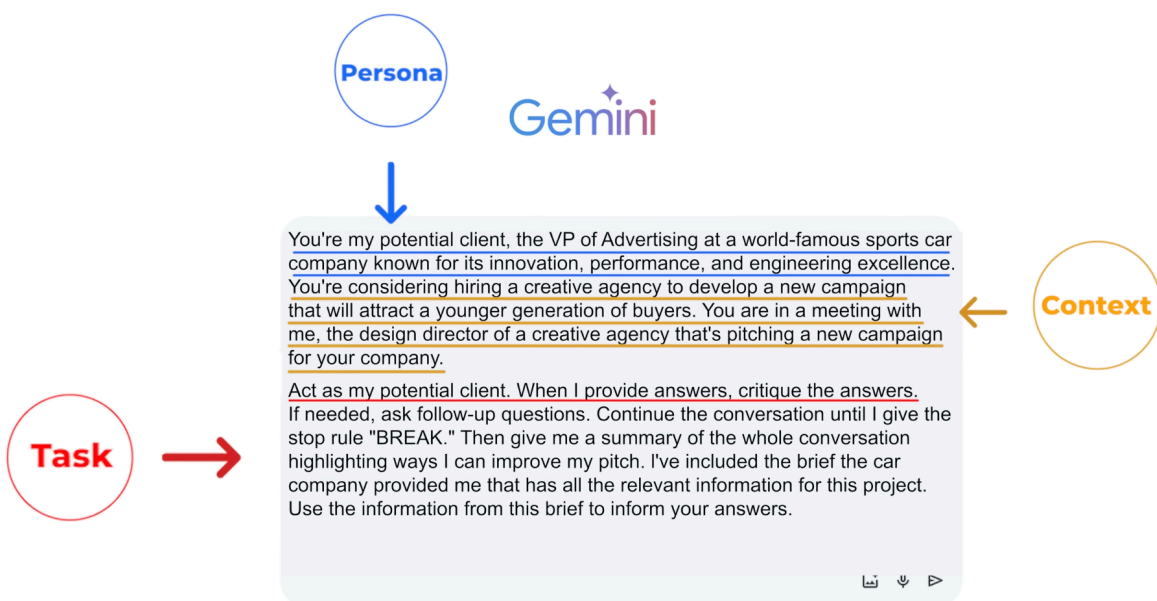

AI AGENT

An AI agent is like an expert designed to help with tasks and answer questions.
Eg. coding agent, marketing agent, learning agent, or just a friend

1) Simulation Agent: interview, roleplay etc etc

2) Agent for Expert (Feedback)

Requested takeaways

Act like a successful personal fitness trainer and talented nutritionist. I'm looking to improve my overall fitness and adopt a healthier lifestyle. Ask me about my workout routines and meal planning, and give me feedback. When I want the conversation to end, I'll write, "no pain, no gain." At the end of our conversation, provide a summary of the advice you provided.
